

SANI MUHAMMAD SANI

Software Engineer | AI Engineer | Cloud & DevOps

+234 8063055417 [Email](#) [Github](#) [LinkedIn](#) [Portfolio](#)

SUMMARY

Software Engineer specializing in AI-powered backend systems, cloud infrastructure, and scalable SaaS applications. Experienced building production APIs with FastAPI, Django, and Laravel, integrating LLMs into real-world products, and deploying cloud-native applications using Docker, OCI, AWS, and GitHub Actions. Passionate about building intelligent software that automates business processes and scales reliably.

TECHNICAL SKILLS

Languages: Python, PHP, JavaScript, SQL, Bash

Backend: FastAPI, Django, Laravel, REST APIs

Frontend: React, Next.js, Angular

AI/ML: OpenAI API, TensorFlow, Scikit-learn, OpenCV, Pandas, NumPy, Jupyter Notebooks

Cloud: OCI, AWS, GCP

Databases: PostgreSQL, MySQL, Redis, Celery

DevOps: Docker, GitHub Actions, Jenkins, Linux, Git, CI/CD, Grafana, Prometheus

EXPERIENCE

SOFTWARE ENGINEER

Century Information Systems Ltd.

Sep 2024 – Present

- Design and develop scalable REST APIs and backend services using Laravel and Angular.
- Integrate AI-powered features that reduced manual processing time and improved user productivity.
- Design secure and scalable backend services with Laravel, MySQL, and Linux
- Implement monitoring, logging, and performance optimization.
- Collaborated with frontend developers to deliver production-ready features.
- Optimized SQL queries, improving API response times by 35%.
- Developed REST APIs supporting multiple enterprise applications.

DATA ANALYST

Quantum Analytics NG

Jan 2023 – Sep 2024

- Built automated data processing and reporting workflows using Python and SQL.
- Developed dashboards and analytical reports to support business decision-making.
- Performed exploratory data analysis and predictive analytics on structured datasets.
- Developed machine learning models for classification and prediction tasks.
- Automated data preparation and feature engineering workflows.

PROJECTS

DATANA – Jul 2026

[Live Demo](#)

Intelligent Data Analytics Platform

- Built an AI-powered analytics platform that automates data analysis and AI business insight generation.
- Designed scalable FastAPI REST APIs with PostgreSQL and Redis caching for improved performance.
- Implemented asynchronous background processing with Celery for long-running analytics and report generation tasks.

- Automated testing and deployments using Docker and GitHub Actions CI/CD pipelines.
- Integrated OpenAI to enable natural language data exploration.

Technologies: Python, FastAPI, OpenAI , OCI, Docker, GitHub Actions, PostgreSQL, Redis, Celery, React

VOX DOCUMENTS – Jun 2026

[Live Demo](#)

Document Intelligence Platform

- Built an AI document platform supporting semantic search, chat, summarization, and voice interaction.
- Built FastAPI backend supporting document ingestion, vector search, and AI inference.
- Designed PostgreSQL schemas, implemented Redis caching to improve query performance.
- Implemented Celery workers for document indexing, embeddings generation, and background AI processing.
- Containerized services with Docker and automated deployments using GitHub Actions CI/CD.
- Deployed cloud workloads on OCI with Prometheus and Grafana monitoring.

Technologies: Python, FastAPI, OCI, Docker, GitHub Actions, PostgreSQL, Redis, Celery, React

HEALYNG – Jan 2026

[Live Demo](#)

Telemedicine SaaS Platform

- Developed secure Django backend APIs for a multi-tenant telemedicine SaaS platform.
- Designed scalable healthcare workflows with PostgreSQL and Redis for session and data caching.
- Implemented Celery background workers for appointment reminders, notifications, and scheduled processing.
- Automated deployments through GitHub Actions CI/CD pipelines.
- Built cloud-ready backend services using Django and PostgreSQL.

Technologies: Python, Django, OpenAI , GitHub Actions, PostgreSQL, Redis, Celery, React

MACHINE LEARNING PROJECTS

Network Intrusion Detection System – Jun 2026

[Live Demo](#)

- Built a machine learning model for detecting malicious network traffic.

Weed Detection & Classification Jan 2026

[Live Demo](#)

- Developed computer vision models for agricultural weed detection and image classification.

Brain Tumor Detection – Sep 2025

[Live Demo](#)

- Built deep learning models for MRI image classification using convolutional neural networks.

Technologies: Python • TensorFlow • OpenCV • Scikit-learn • Pandas

CERTIFICATIONS

- Master in Cyber Security — Digital Regenesys (2024)
- Data Science with Python — Simplilearn (2024)
- Big Data Analytics — Simplilearn (2024)
- MongoDB Developer — Simplilearn (2023)
- React Developer — Simplilearn (2023)

EDUCATION

Bachelor of Science (B.Sc.) in Computer Science

Umaru Musa Yar'adua University

Graduated: 2019
